GROWTH OF \$10,000

Time period 11/01/13 - 09/30/2020. Source: Bloomberg L.P., Liquid Strategies.

Municipal Bond Strategy

(Illustrative Numbers)

Q3 2020

**Net of fees assumes a 0.75% management fee applied monthly. These returns are illustrative, hypothetical numbers representative of two actual return streams (Liquid Strategies Overlay and the iShares National Muni Bond ETF). The numbers illustrate what would have happened had we taken the iShares National Muni Bond ETF returns and added Liquid Strategy Overlay returns to them. Source: Morningstar, Liquid Strategies.*

The performance data presented reflects the deduction of standard management fees of 0.75% annually for the Liquid Strategies Overlay. For further details on fees, please refer to Part 2A of Adviser's Form ADV. Inherent in any investment is the potential for loss. Past performance results are not necessarily indicative of future performance results. All specific securities mentioned in this fact sheet are shown for illustrative purposes only. There is no guarantee that such securities will be used in the management of your portfolio as market conditions, prices or expectations of the manager may change at any time without notice. This fact sheet is not meant as a general guide to investing, nor as a source of any specific investment recommendations. This fact sheet makes no implied nor express recommendations concerning the manner in which any client's accounts should or would be handled. The actual characteristics with respect to any particular client account will vary based on a number of factors including but not limited to: (1) the size of the account; (2) applicable investment restrictions in place, if any, and; (3) market exigencies at the time of investment. It should not be assumed that any of the securities transactions or holdings discussed were or will prove to be profitable, or that the investment recommendations or decisions we make in the future will be profitable or will equal the investment performance of the securities discussed herein. The investments and services to which portions of this presentation relates are only available to persons with a categorization as a qualified client, as defined under Rule 205-3 of the Investment Adviser Act of 1940, and other persons should not act or rely on it.

Illustrative performance is not an indicator of future actual results. The results reflect performance of a strategy not offered to investors during the time indicated in the analysis and do not represent returns that any investor actually attained. Illustrative results are calculated by the retroactive application of the Liquid Strategies Overlay strategy constructed on the basis of historical data and based on assumptions integral to this fact sheet which may or may not be testable and are subject to losses. General assumptions include: The manager would have been able to purchase securities in a single portfolio with similar characteristics to the Liquid Strategies Overlay and the Bloomberg Barclays Municipal Bond Index recommended by the model, and the markets were sufficiently liquid to permit all trading. Changes in these assumptions may have a material impact on the illustrative returns presented. No representations and warranties are made as to the reasonableness of the assumptions. This information is provided for illustrative purposes only. Actual performance may differ significantly from hypothetical performance.

Bloomberg Barclays Municipal Bond Index – Bloomberg Barclays Municipal Bond Index is an unmanaged index commonly used as benchmarks to measure the performance and characteristics of investment grade municipal bond securities.

Sharpe Ratio - A measure for calculating risk-adjusted return. The Sharpe ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. Subtracting the risk-free rate from the mean return, the performance associated with risk-taking activities can be isolated. $\text{Sharpe ratio} = (\text{Mean portfolio return} - \text{Risk-free rate}) / \text{Standard deviation of portfolio return}$. For Sharpe Ratio calculations in this presentation, the "risk free rate" is represented by the annualized monthly returns of the 3 Month US T-Bill.

Annualized Distributed Income – Represents annualized estimated distributions of the actual income generated by the Liquid Strategies Overlay and the actual income distributed from the underlying security (iShares Municipal Bond ETF) since the inception of the Overlay strategy (11/1/2013). Index distribution based on income distributed from the iShares US Municipal Bond ETF.
